GAIA ECOLOGICAL

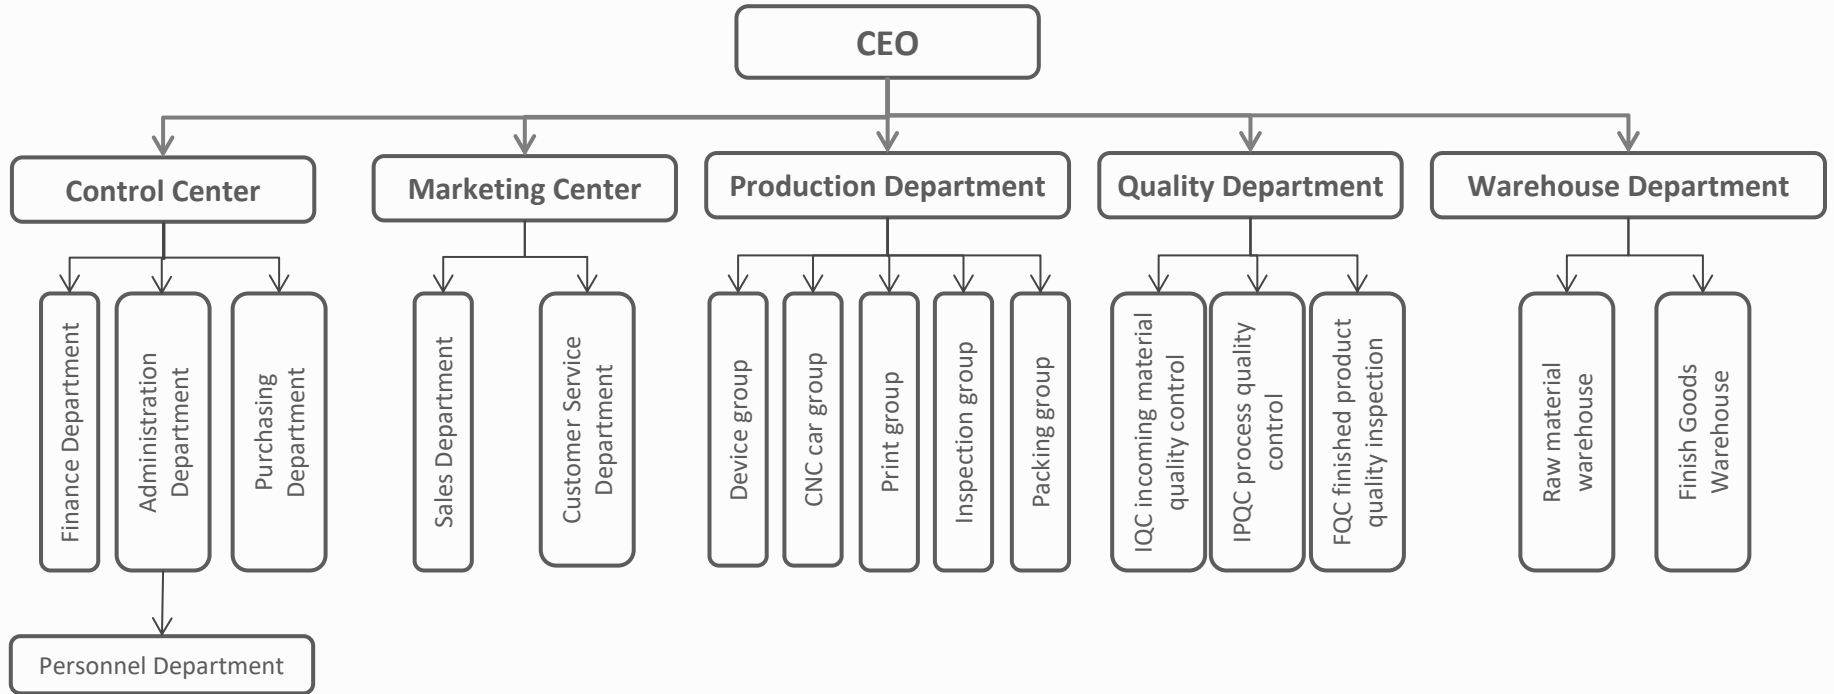

---

An innovative comprehensive enterprise with diatomite as its core material

# Company Profile

GAIA Ecological Technology Co., Ltd. is a diatomite as the core material for innovation of comprehensive enterprises, covering the collection and processing of diatomite mineral Earth, Diatomite Building Materials R & D, and production, DIATOMITE HOUSEHOLD PRODUCTS IN-DEPTH R & D and Production. After researching the application market of diatomite in the field of construction and household products at home and abroad, Gaia, together with the Soochow University, China University of Mining and Technology and other professional institutions, dug deep into the functional properties of diatomite In view of the strong adsorption performance of Diatomite, environmental protection performance, integration of many authorities in the industry, diatomite products, home, popularization of long-term Investment and development.

# Organization Structure

# History Timeline

# Business Cooperation

The company and many domestic and foreign well-known brands such as Alibaba, Netease, Suning, JD.com, Hailan group, Walmart, Costco, Aeon and other close cooperation, in the industry have established a certain reputation.

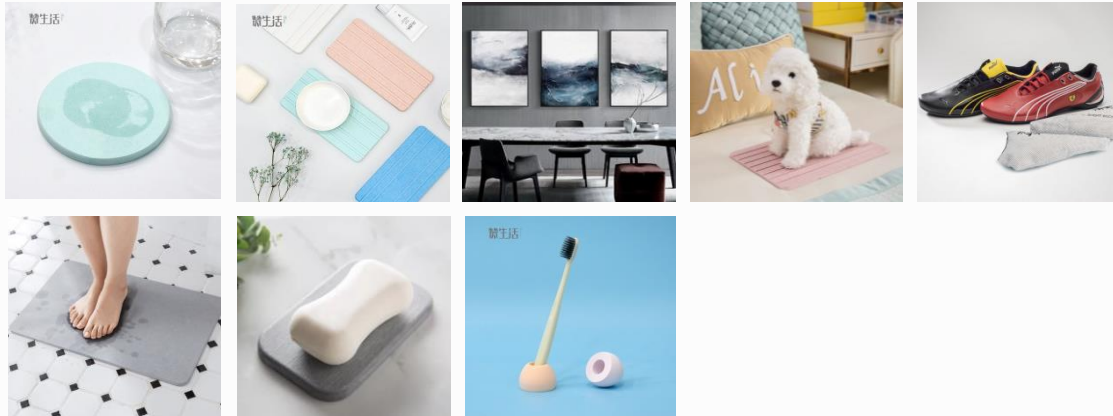

# Product Structure

Household products are currently divided into three categories: Home, Washing care, Kitchen.

Household: Coasters, Multi-functional dishes, Murals, Pet Pad, Except smell particles.

Washing care: Bathroom (Bath mat, Soap pad, Toothbrush rack), Beauty makeup (Makeup rack)

Kitchen: Pot Pad, Cup Rack

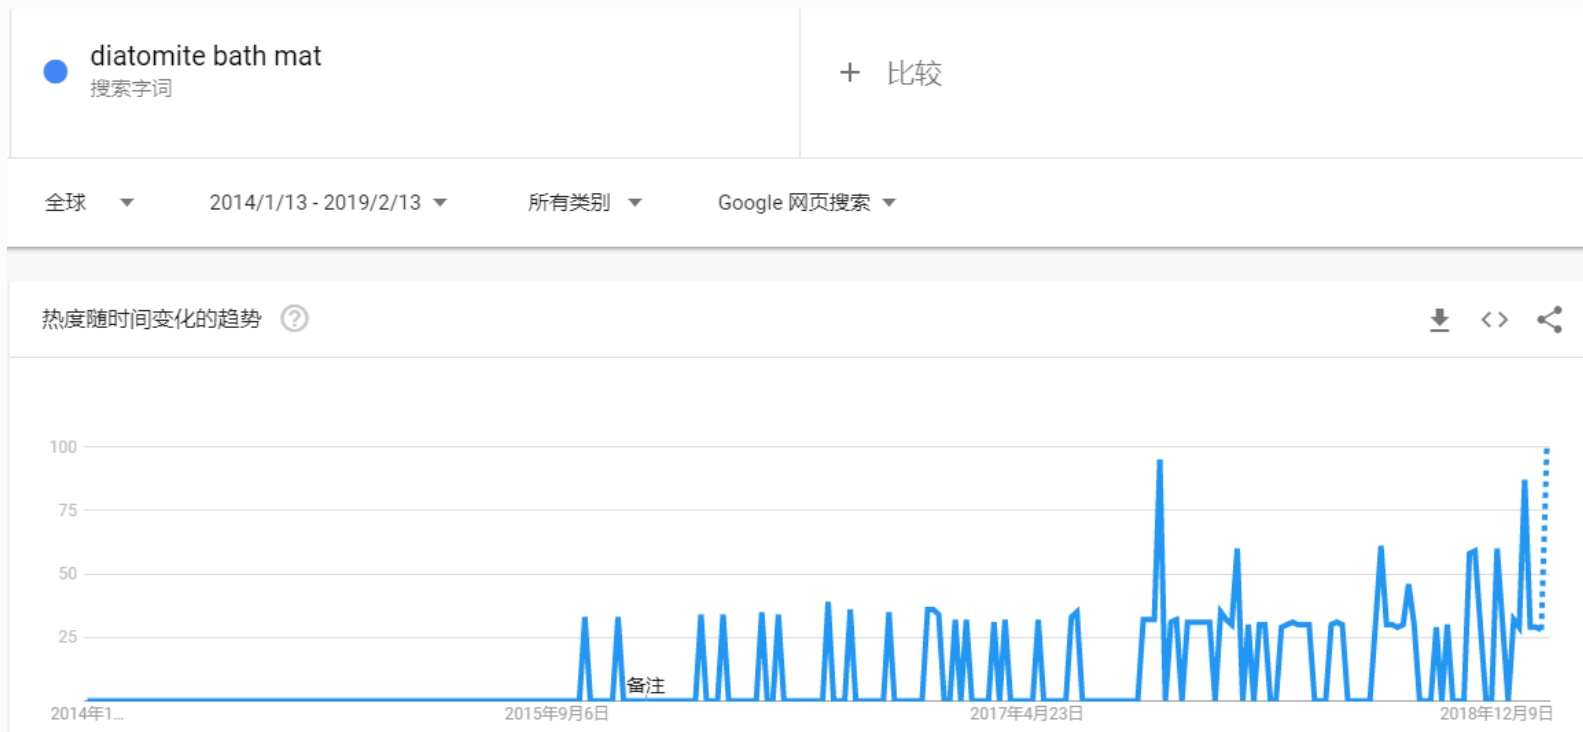

# Core Selling Point

- The main composition of diatomite is silicic acid, diatomite as the core material products, with super-fiber, porous and other characteristics, its ultra-fine pores than charcoal more than 5000 to 6000 times. When the ambient humidity rises, the ultra-fine holes in the diatomite wall material can automatically absorb the moisture in the air and store it. If the moisture in the indoor air decreases and the humidity drops, the diatomite wall material can release the moisture stored in the ultra-fine holes, and the sterilization can be achieved by adjusting the change of the humidity and the Chemical Reaction Eliminate peculiar smell and absorb, decompose harmful chemical substance, and can keep dry and clean for a long time.
- As a completely natural environmental protection material, diatomite products have natural advantages, under the premise of giving full play to the original properties of diatomite, fully considering the product application scenarios, so as to do no harm to the human body.
- DIATOMITE has strong plasticity, which determines the application of the scene is not limited, whether it is the kitchen moisture sterilization supplies or food storage containers, diatomite can be used in different forms to meet the needs of consumers.
- Green health is the biggest demand and field of future consumption, we strictly control the raw materials on the basis of each product can be edible level, the greatest extent to protect the health of consumers.

# Product Status

Time: 2014-2019 Keyword: diatomite bath mat

Trend: It can be seen that the global trend of this product has developed steadily and gradually increased.
